#### Appendix A

#### Complete List of Quantifiable Objectives by Sub-Region

Appendix A contains a list of the completed and potential Quantifiable Objectives (QOs). To-date, 196 potential QOs have been identified. Of these, approximately 50 have been completed. WUE proposals that incorporate completed QOs will be given extra weight in the selection process.

Readily available data does not exist to allow completion of the remaining QOs. However, approximately 45 of the uncompleted QOs have been identified as high priority, and proposals that are linked to these priority outcomes (or Targeted Benefits) will also receive extra weight in the selections (although not as much weight as those that incorporate completed QOs).

Appendix A is organized into 21 chapters that correspond to the 21 Sub-Regions defined in the QO analysis. Each chapter contains background information and details as illustrated in Figure A.I.

193	Core: Reduce unwanted ET by acre-feet per year.
194	Core: Enhance the effectiveness of potential conjunctive use programs by reducing flows to groundwater to acre feet per year during periods of shortage; and increasing flows to groundwater to acre feet per year during periods of excess.
195	Core: While remaining within the salinity threshold for a given crop, take advantage of periodic opportunities to reduce salinity impacts by increasing leaching by during periods of excess supply and by reducing by leaching during water short periods.

## **Step 4. Area Affected by Targeted Benefit**

Area affected are the 38,910 acres identified in Step 1A.

## **Step 5. Water Flow Path Elements**

The flow path elements used in this analysis are given in Step 1.

## **Step 6. Idealized Agricultural Potential**

Additional ET research is required to determine this component.

# **Step 7. Achievable Agricultural Potential**

The farm Available Agricultural Potential is the same as Step 3B.

## Step 8. Quantifiable Objective

A. For ET Reduction the Quantifiable Objective is Step 3B
